

Spitronics Venus3 Quick Start Guide

This guide will help you to quickly get started with your Venus3 products. This is handy for customers that are familiar with our products. If you are a beginner, it would be advisable to start with the more detailed [Getting Started with Venus3 and Hyperspace](#) document. Some links will not open on the phone as this document is made for the Windows PC/Laptop. Venus3 documentation are hosted online in small PDF files for easy reference and printing or downloading. This is due to the number of files and combination of drawings and features.

Android Support App

If you have an Android phone then install the [Support App](#) which will put all this information in your pocket ready to use. You can download it and send it to your phone on WhatsApp and install it from there.

QR to ***Support App*** APK File for Mobile Software Download on the phone. On your phone open a browser and download this APK file. Then on your File Browser open the downloads folder on your phone and run this file. Follow the instructions.

**NB! Do not connect the ECU to power before you read the [Startup Procedure](#).
Do not connect the USB cable before the USB drivers are installed.**

Step 1. Download the [Spitronics Installer](#) and download the software and USB drivers.

Follow this link to the guide on how to. Below is a picture of the installer dashboard:

Hyperspace Installer V1.0.11 2024-10-03 17:00:00

Welcome to the Spitronics installer

Device Manager Software

Step 3. Download the [Venus3 Safety Precautions](#).

This document explains common mistakes that installers do that may damage the products. Reading through this document can ensure product safety and reliability.

Step 4. Download the [Startup Procedure](#).

Your ECU has many selections which could damage the ECU or Engine components if it is not set correctly. Dis document will be a guide to prevent failure which is the responsibility of the installer. Follow it step for step from the beginning and don't go on if there are faults in the steps.

Step 5. Download the [Drawings for Venus3](#)

All the drawings for the Venus3 are modular due to the many compilations that can be done with different firmware and features. Make sure you have the right connections and setup to prevent damage to the unit. This can be viewed online on the website under **Online Manuals**, in the tuning software under **Help**, or on the Android app on your phone under **Spitronics**.

Step 6. Download or Open the Online [Software Manuals for Hyperspace](#)

These manuals are broken in topics and contain all the relevant info on settings and connection diagrams. This can be viewed online on the website under **Online Manuals**, in the tuning software under **Help**, or on the Android app on your phone under **Spitronics**.

This should get you started. Please read through the manuals and familiarize yourself with the products. If you are in doubt, rather ask and get help from experienced installers.
